USING THIS SCHEDULE

THE ULTIMATE SOLUTION

Most nutrients come as two bottles, A and B, that can't be mixed and have to be added separately. IONIC is one. Add it to the tank at the amounts overleaf, in millilitres per litre of water, stir, and the mix is ready. The pH holds steady, so it should need little adjustment.

GOOD PRACTICE

- 🧪 Add products to the tank one at a time, stirring between each. Never mix concentrates straight from the bottle.
- 🧪 Keep the tank covered. Light in stored solution eventually means algae.
- 🧪 Every medium doses differently. IONIC Hydro, Coco and Soil each have their own schedule.
- 🧪 Measure every dose. Eyeballing is where most feed problems start.

THE SYSTEM

COCO GROW

Formulated for the unique chemistry of coco. Rebalances K, Ca and Mg before problems start.

COCO BLOOM

Coco flowering, in perfect balance. Calcium and magnesium stay available when demand peaks.

TONIC

Restores vigour and corrects deficiency. Calcium and magnesium, plus chelated iron, amino acids and seaweed.

PK

Phosphorus and potassium at 14:15, for the hungriest weeks. Fortified with iron.

ROOT BOOST

Plant-based root stimulator that ignites rapid root growth in early establishment. 100% organic.

FLOWER BOOST

Plant-based bloom stimulator built on triacontanol. Fuels explosive blooms, yield and flavour.
